

IAM Policies

Use the **manager** IAM user to complete the exercises in this lesson. You will need to supply the required permissions for the **manager** user.

Navigate to the [IAM console](#) and select the **manager** user.

Add the following AWS managed policies (permissions):

- **AmazonElastiCacheFullAccess**: This will allow the creation and deletion ElasticCache instances
- **AWSLambdaFullAccess**: This will allow the creation, update, and deletion of serverless (Lambda) functions
- **AmazonAPIGatewayAdministrator**: This will allow the manager to configure API Gateway to connect to our Lambda Function via HTTP
