

Clean Up

In this section, you will clean up resources that might exceed the free tier limits.

Some resources always free:

- IAM identities
- IAM policies
- Security Groups

You might still want to remove these resources now that you are done with the course. But you will not incur any charges if you fail to delete them.

Checklist

You should delete all resources that could incur charges after the course ends.

S3

[S3 Console](#)

Although S3 buckets are free up to the first 5GB, you should delete this if you don't need it.

In order to delete the S3 bucket, you must first delete all files and folders from the bucket. Only then will you be able to delete the bucket itself.

EC2

[EC2 Console](#)

You should terminate any instances you launched in this course.

Check all the regions in which you have been working! It's easy to miss an instance you created in another region, unless you specifically check that region.

Elastic IP Addresses

[Elastic IP Console](#)

Elastic IP addresses incur charges no traffic is flowing through them. Make sure to delete any Elastic IP addresses.

Once again, **check all the regions in which you have been working.** Don't miss anything!
