

Create Your Own AWS Account

Follow these steps to create your own AWS account. You can skip these steps if you already have an AWS account.

1. Visit the [Amazon Web Services](#) homepage
2. Click the **Create A Free Account** button
3. Provide your email and a strong password, and name your AWS account
4. Choose **Personal** account - there is no difference in features or services between a Personal and a Professional account
5. Fill in the required fields and click **Continue**
6. **Add a payment method.** In this course, we will use services within the [AWS Free Tier](#), so that you will not be charged. However, the Free Tier has limits and AWS will eventually charge you if you do not terminate your resources. At the end of this course, please remember to delete all the resources you have created.
7. Specify a payment method.
